VEGETATION CLASSIFICATION

Where space permits, tree and scrub symbols in woods are shown in groups of four, three, two or singly to indicate close, medium, open or scattered density of trees or scrub.

AREAS

Area measurement is to plan edge only.

The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267..... parcel number

1809ha..... area in hectares

447..... area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.

Enclosures or features joined for measurement of area.

Limit of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2.471 05

To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point in relation to the grid lines, the following system is used:

1. Take the two letters preceding the sheet number.....TQ

2. Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin.....058

3. Take the east edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin.....058

4. The resulting four figure number is the Easting.

5. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin.....291

6. The resulting four figure number is the Northing.

7. The full grid reference is given by writing first the Easting, followed by the Northing and then by the Northing.
